

Website Technology Report – aquaj1.com

1. Overall Structure

The website appears to be a traditionally built multi-page static site using basic HTML, CSS, and JavaScript.

2. CMS / Platform

There are no detectable signs of WordPress, Shopify, Wix, Joomla, or any other major CMS. The site seems custom-built.

3. Frontend Technologies

- Standard HTML structure
- CSS for styling and layout
- JavaScript for basic interactivity

No modern SPA frameworks such as React, Vue, or Angular are detected.

4. Backend / Hosting

The backend stack is not clearly visible. The site likely runs on common shared hosting (Apache/Nginx), but specific server technologies are not exposed publicly.

5. Notes

Overall layout and image handling indicate a manually coded website rather than a template-based CMS. The structure is simple, fast-loading, and typical of static business websites.

Conclusion

The website is most likely a custom static HTML/CSS/JS site without the use of any large frameworks or content management systems.
