

Website Technology Report – aquaj1.com

This is a short and clean report summarizing the web technologies used for the website **aquaj1.com**. **1.**

Overall Structure

The website appears to be built as a traditional multi-page static site using basic HTML, CSS, and JavaScript. **2. CMS/Platform**

No signs of WordPress, Shopify, Wix, Joomla, or any major CMS. It looks like a custom-built website. **3.**

Frontend Technologies

- Standard HTML layout
- CSS for styling
- JavaScript for basic interactivity

No modern SPA frameworks (React, Vue, Angular) detected. **4. Backend / Hosting**

Backend technology is not explicitly visible. The site likely uses common hosting (Apache/Nginx), but specifics cannot be confirmed from the public HTML. **5. Notes**

Images and page layout suggest a manually coded site rather than a template-driven CMS.

Conclusion

The website is most likely a custom static HTML/CSS/JS implementation without any large frameworks or CMS platforms.
